Work experience

2014-Present RADIO FREE EUROPE / RADIO LIBERTY

Lead Frontend Developer

My role in the organisation is to define and develop JS and CSS for one of the biggest CMS.

It supports right to left languages, such as Arabic, and up to down languages, such as Chinese. We are the only team that is developing responsive design news sites for so many languages. Our closest peer is the BBC with 32 languages - almost half of what we do.

My responsibilities:

- JS, SASS, Development
- System architecture
- JS training and guidelines
- Continuous Integration Methodics

2014-Present FREELANCER

Various projects

As an independent specialist I have done this:

- AngularJS intranet modules for an automotive company
- PhantomJS + Node.js website preview rendering API
- WordPress and Drupal e-commerce websites
- SVG interactive infographics

2013-2014 SUMMIT MEDIA

Lead Frontend Developer

My role in the company was:

- To implement less CSS (guidelines, training, tools)
- Backbone.js development, training
- To develop WYSIWYG editor for Magento eCommerce solutions
- To develop big eCommerce solutions (custom development)

2011-2012 UNITY MOBILE

Product Manager

As a technical person I managed a product development of new WYSIWYG website builder for eCommerce websites.

2009-2011 SANOMA MEDIA (CZ/HU/FI)

Mobile Product Manager

Product management (Payment solutions, iPhone apps), Education, Training

2004-2007 WIRENODE

Founder, CTO, JEE/JS Lead Developer, Product Manager

As a co-founder of the small company (6 empl.) I had been doing:

- CTO, Senior Java Developer
- Product manager
- Business Development Manager

We produced:

- White-label SW platforms for TELCO (marketing tools, web builders)
- A micro-payment solution

About me

Name: Tomáš Randus

DOB: 01 August 81

Nationality: Czech Republic

Objective

Looking forward to work with you on a great internet technology products.

Education

Bachelor of Media Communication - Charles University-2012

Language skills

English: 

Deutsch: 

Reference

Available on LinkedIn:

<http://linkedin.com/in/randus> or you can ask me for direct contacts.

- JME mobile games and business applications
- Content delivery platforms (E-book reader, streaming platforms)

(I have already sold my share)

2013-2014 CLEVERLANCE

JEE, JME Senior Developer

Banking SW projects, TELCO & Game development

Skills

JavaScript

I have been working with the JS for years. I know the language, tools and libraries well.

Backbone.js - I like the library, it allows me to structure code well and it's light weight. I have a deep experience with the Backbone.js.

AngularJS - I know Angular's design patterns and API and I'm able to develop applications with that. I'm following the community changes.

Google Closure Tools - I'm used to structure my code in the Closure way - namespaces, annotations... I use the Builder and the SOY templates.

jQuery - I can develop straight and easy-to-read code with this powerful tool. I have been teaching this sometimes.

Node.js - This is my main server and terminal tool for everything. It's the best for me. I know the platform and use that every day.

Phantom.js - I can integrate the tool in rendering and testing scenarios (TDD, End-to-end).

Grunt.js - I can prepare and maintain rich buildscripts with many tasks. It's helpful for development, deployment and testing automation.

Jasmine - I can apply TDD principles in JavaScript development. I use the Jasmine library in combination with the Grunt.

SeleniumHQ - I have an experience with the end-to-end testing by Selenium webdriver in combination with the Nightwatch.js and the Jenkins CI

CSS

I know how to create good CSS styles. I also know browsers limits and 'special' capabilities.

less - I'm building all my CSS by the *less precompiler* for years. I know that very well and I'm teaching that sometimes.

Sass - I have implemented Sass (in its CSS back-compatible syntax) on a project of CMS for *Voice Of America* and *Radio Free Europe* there are tens news sites based on my work.

Java

Java EE - I have a long-term experience with server and desktop development in Java. *(I have ended with the Java 6)*

Java ME - I have spent 3 years as a Micro Java developer for MIDP and CLDC devices. During this period I have published many business and content delivery applications.

Cloud App Engines and Machines

I prefer to use new modern APP engines instead of real or virtual machines.

Redhat Openshift - I have prepared many Node.js applications to be hosted in OpenShift Cloud containers.

Google APP Engine - I know the old App Engine (PHP and Java) and also the new one (cartridge based).

Amazon AWS - I can setup and use virtual computers in Amazon Cloud and also know some of additional services (S3, CloudFront...)

Integration

I can use GIT, SVN and Mercurial even in bigger teams.

Additional skills

During my carrier I have spent some time as a product manager that helps me understand a wider context.

Product Management - I have an experience with product specifications, user stories, measuring and management.

Business Development - I can analyse business aspects and setup a go-to market strategy or count a project ROI.

Media Literacy - I have studied that on an university. I'm still interested in the future of the industry etc.
